Tickets by category and channel

SLA attainment by priority (darker = further below the 90% goal)

Self-Service Opportunity

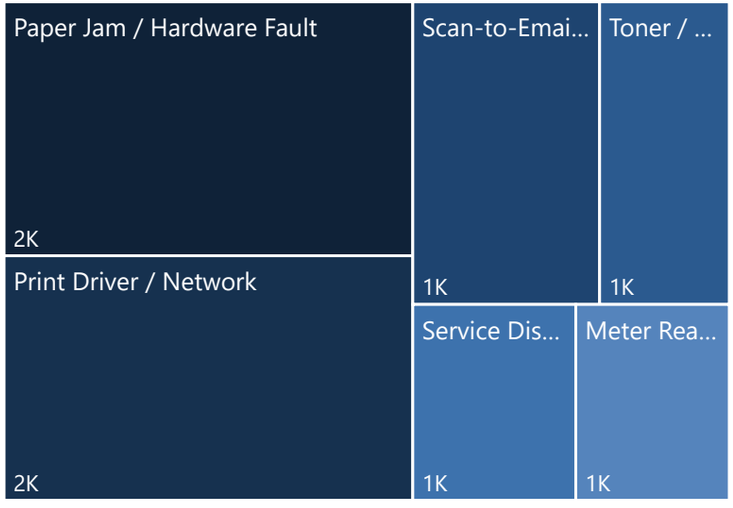

Supplies and meter reads still handled by live agents · hours saved = adoption × (live hours − live tickets × portal minutes ÷ 60) · $0.85 per agent minute

Simple requests, live	Their agent hours	Hours saved / yr	FTE freed	Annual value
13,363	1,604	830	0.44	$42,307

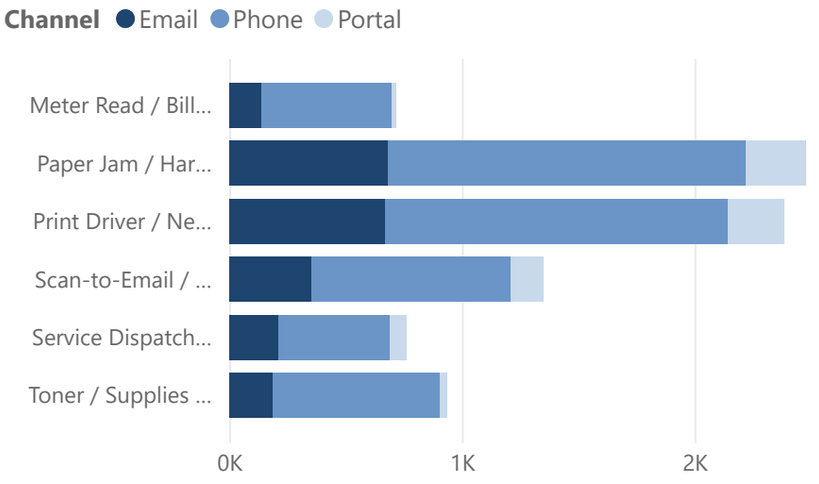

Portal adoption (what-if)

All

Where agent hours go (darker = more hours)

Agent hours by category and channel

Deflection scope: simple requests on phone/email

Category	Channel	Tickets	Agent hours
Meter Read / Billing	Email	1,220	141
Meter Read / Billing	Phone	3,932	557
Toner / Supplies Reorder	Email	2,025	188
Toner / Supplies Reorder	Phone	6,186	718
Total		**13,363**	**1,604**

What this page shows

Toner and supply reorders and meter reads are simple, repeatable requests, yet most arrive by phone or email and take a live agent's time. The same requests submitted through the portal take far fewer agent minutes.

Use the adoption slicer to see the impact at 20-100% portal adoption.

Estimates come from simulated data and stated assumptions; they are opportunities, not realized savings.

Recommendation

Launch a self-service portal with automatic supply reordering. At 60% adoption: about 830 agent hours and $42K a year, roughly 0.4 of a full-time agent freed for harder tickets.

SLA & Staffing

Breach % = share of tickets not resolved within the SLA for their priority (P1 4h · P2 8h · P3 24h · P4 72h)

Breach rate, Mon 8-11am

20.1%

Breach rate, other weekday hours

11.6%

Overall SLA attainment

87.7%

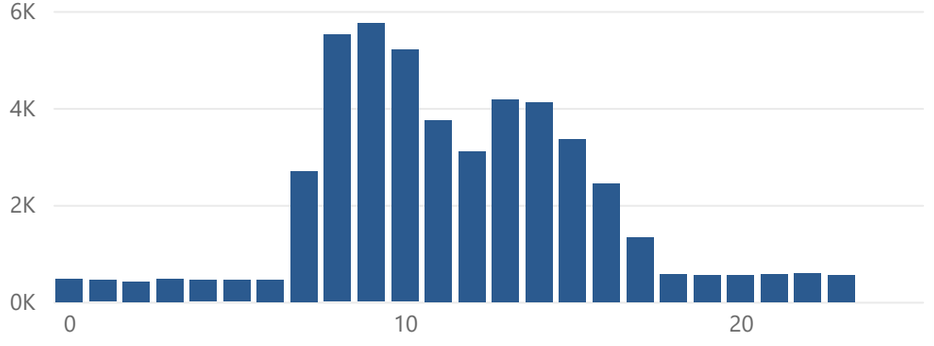

P1 (critical) SLA attainment

52.5%

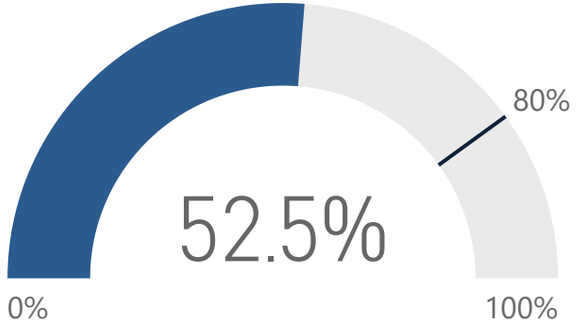

SLA breach heatmap by weekday and hour of creation (darker = more breaches)

Ticket arrivals by hour

P1 SLA vs 80% target

Recommendation

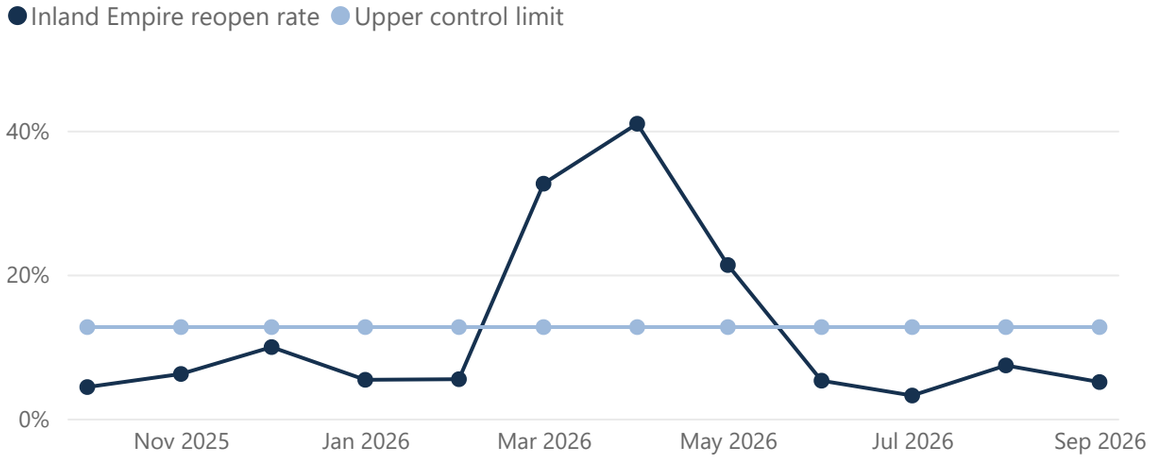

Move three late-shift agents to a 7am Monday start: breaches pile up in the Monday 8-11am backlog while late shifts have spare capacity. Cost-neutral; about 360 fewer breaches a year. Add a P1 fast-track dispatch path: critical tickets meet SLA only about half the time.

Data Quality & Definitions

Every cleaning step is counted so totals trace from the raw extract to the model

Rows received (raw)

48,025

Defects removed or corrected

60

Rows loaded to model

48,000

Validation and cleaning log (Python pipeline, mirrored in Power Query)

#	Check	Rows	Action
1	Rows received (raw extract)	48,025	Starting point
2	Duplicate tickets	25	Removed (same ticket_id)
3	Region names with wrong case	20	Standardized to title case
4	Negative handle times	15	Corrected to absolute value
5	Resolved before created	0	Checked; none found
6	Missing ticket IDs	0	Checked; none found
7	Rows after cleaning	48,000	Loaded to the model

KPI definitions

SLA attainment: tickets resolved within the priority's SLA ÷ tickets
First-contact resolution: tickets solved without a follow-up contact ÷ tickets
Reopen rate: tickets reopened after resolution ÷ tickets
Escalation rate: tickets escalated to Tier 2 ÷ tickets
Avg handle time: average agent minutes per ticket
Cost per ticket: loaded agent cost ÷ tickets
CSAT: average 1-5 survey score; about 35% of customers respond

Validated across tools

KPIs in this report match the Python notebook, the SQL queries and the Excel workbook built from the same cleaned data. Automated tests in the repository fail if pandas and SQL disagree.
Checked in Power BI: 48,000 tickets · 87.7% SLA · 56.2% FCR · 830 hours saved at 60% adoption · Monday 8-11am breach 20.1% vs 11.6% · P1 SLA 52.5%.
